## EdgeMax Loudspeakers

Break free of the limitations of the in-ceiling loudspeaker category with Bose Professional's EdgeMax series. EdgeMax loudspeakers combine high-fidelity sound with unique directionality to deliver the coverage patterns, high SPL, and frequency response of larger surface-mount loudspeakers—but with a clean visual aesthetic.

Plus, our new LP models deliver amazing EdgeMax sound in a smaller, low-profile package for easier install and more design possibilities.

### APPLICATIONS

- Retail stores
- Restaurants and bars
- Concourse
- Transportation facilities
- Resorts and hospitality venues
- Places of worship
- Conference rooms
- Fitness centers

### Room-filling sound with hidden directionality

The EdgeMax series features patented PhaseGuide® technology that directs sound asymmetrically into the room to deliver amazing performance, directionality, and voice intelligibility that puts the family in a class by itself. EdgeMax sounds like a surface-mount loudspeaker, looks like an in-ceiling loudspeaker, and directs sound asymmetrically into spaces where traditional loudspeakers can't go.

### Bring big sound to smaller spaces with new EdgeMax LP

With a shallow backcan height of just 4 inches (10 cm) and lighter weight, our new EdgeMax LP loudspeakers are easier to install and suited for more projects, such as rooms with above-ceiling limitations. These low-profile versions also feature an 80-degree vertical coverage angle for use in rooms that have lower ceilings, such as conferencing applications.

### PhaseGuide technology

Patented PhaseGuide technology evenly distributes sound asymmetrically throughout the space to ensure all listeners enjoy the same experience—regardless of their location.

### Powerful two-way sound

High-frequency compression driver and high-excitation woofer for exceptional audio quality and power. Wall boundary loading provides greater bass response.

### More sound. Fewer loudspeakers.

EdgeMax loudspeakers are engineered to be installed in corners and along ceiling edges, projecting sound inward for room-filling coverage. This means fewer units required compared to typical loudspeakers.

## COLUMN ARRAYS

### Modular Column Arrays

Modular column arrays provide wide horizontal coverage, with narrow vertical coverage, making them an excellent choice for acoustically demanding small- to medium-sized spaces that require high speech intelligibility. Their unique modular design allows multiple units to be vertically stacked to provide increased pattern control, throw, and sound level.

**Twelve 2.25-inch full-range drivers** mounted in a vertical line array deliver wide horizontal coverage with narrow vertical pattern control

**Modular design** allows stacking of multiple enclosures in a line array configuration to provide increased vertical pattern control improving “throw” distance and reducing unwanted floor/ceiling reflections

**Consistent sound** across modular column array modules

**Digitally steerable module** and an outdoor module provide versatility and flexibility in design options

**Optional brackets** allow easy installation of single-, double- or triple-stack line array modules

Ideal for zone-expansion applications, Bose Professional PowerSpace amplifiers enhance any premium commercial sound installation with clean, reliable power—and digital connectivity. A Bose Professional AmpLink input allows for multiple channels of uncompressed, low-latency digital audio from our DSPs via a single Cat 5 cable.

**AmpLink input** for simplified multichannel digital audio connection to compatible DSPs, reducing terminations and related points of failure

**Load-independent outputs** deliver full channel power to either low-impedance (4-8 Ω) or high-impedance (70/100V) loads without bridging

**I-Share outputs** deliver 2x power level by combining the current of two channels

**Auto-standby mode** saves power when audio signal falls below a set threshold, then wakes when audio returns
